# Security Testing – CREST Approved

**Asterisk Information Security takes pride in providing thorough security testing services, to the highest standards, and presenting findings and recommendations that are risk-based and take into account the context of the system under test.**

In 2012, Asterisk was invited to participate in the technical establishment committee for CREST in Australia (The Council of Registered Ethical Security Testers), an initiative of the Federal Government.

CREST aims to provide client organisations with a degree of assurance that security testing providers maintain the highest ethical standards and perform repeatable and high quality security testing.

CREST Approved status requires dual-factor recognition that both the organisation meets certain criteria to support the delivery of penetration testing services and that individuals performing the testing have CREST certifications.

As a CREST Approved company, Asterisk is subjected to ongoing audit and scrutiny by CREST Australia and must adhere to the organisation's Code of Conduct.

## **Why should you insist on CREST Approved services?**

When engaging a CREST Approved organisation, you can be confident that the work will be carried out by qualified individuals with up to date knowledge of the latest vulnerabilities and techniques used by real attackers, backed up by a company with appropriate methodologies for the secure storage and protection of your data.

Asterisk's continued association with CREST highlights our commitment to best practice testing and quality information security services.

## **WE ARE ALL ABOUT INFORMATION SECURITY**

Asterisk Information Security is a specialist consultancy providing actionable advice and solutions to enhance information security and reduce business risk. The team at Asterisk has been involved in the information security industry for over 18 years. Our clients range from SME to large enterprises across a variety of sectors including government, mining and resources, critical infrastructure, finance, retail, healthcare and not-for-profit.

For further information on how Asterisk can improve your information security, please contact **1800 651 420**
