

MANAGEMENT ARCHITECTURE **ASSESSMENT** INFRASTRUCTURE

Security Testing

More than 70% of attacks exploited known vulnerabilities with available patches, according to the 2015 Verizon Data Breach Report. Some of these vulnerabilities date back to 1999! Security Testing ensures these vulnerabilities are identified and organisations can address issues before they become security incidents.

The team at Asterisk Information Security take pride in providing thorough security testing services, to the highest standards. The findings and recommendations that are presented are risk-based and take into account the context of the environment and the sensitivity and criticality of the system being tested.

At Asterisk, we have the capability and experience to perform a wide range of security testing engagements:

- Vulnerability Assessment
- Penetration Testing
- Application Security Testing
- Mobile Application Testing
- SCADA and Process Control Testing
- Advanced Persistent Threat simulation
- Red Teaming exercises that assess the security of your organisation at every level

Asterisk's security testing methodology is a mature approach based upon several existing application testing frameworks such as:

- The OWASP Testing Guide
- OSSTMM
- NIST SP800-115

By harnessing recognised methodologies and applying our own skillset and experience, Asterisk offers a robust testing approach to suit your organisation in assessing any risks associated with your application or environment.

Asterisk is a member of the Council of Registered Ethical Security Testers (CREST). CREST aims to provide client organisations with assurance that providers of security testing maintain the highest ethical standards, while providing repeatable and high quality security testing services.

Security testing allows an organisation to take into context the risks associated with operating in the current agile threat environment. By identifying key risks in your organisation or application, you can prevent security risks from becoming security incidents.

WE ARE ALL ABOUT INFORMATION SECURITY

Asterisk Information Security is a specialist consultancy providing actionable advice and solutions to enhance information security and reduce business risk. The team at Asterisk has been involved in the information security industry for over 18 years. Our clients range from SME to large enterprises across a variety of sectors including government, mining and resources, critical infrastructure, finance, retail, healthcare and not-for-profit.

For further information on how Asterisk can improve your information security, please contact **1800 651 420**
